Aim:

To create view(s) based on table(s) or view(s) and observe its behaviorwhile performing update operations on it.

Consider the schema used in the Assignment-3.

Create the following *views* and perform DML operations on it. Classify it as *updatable or not*.

1. Create a view named **Datsun_Cars,** which display the car id, model and descriptions of Datsun model.

2. Create a view called **Car_List** that shows the car id, model, description and operational parameters of all cars produced during 1974. Make surethat, the year should not be reassigned to any other value through view.

3. Create a view named **European_Makers** that will display the makername, full name and the country name of car makers from Europe.

4. Create a view named **Cars_Count** which displays total number of cars manufactured by each country.

HELP:
1. To view the meta-data of views:
   USER_VIEWS, USER_UPDATABLE_COLUMNS
2. To view the meta-data of sequences:
   USER_SEQUENCES
